Subject: Critical: Process to update CR entries for v2 migration

Hi all,

We are glad to inform you that Sahamati has released a new version of the Central Registry (CR) GET API, which network participants use to fetch the details of other entities in the network. This version of the API is called V2.0 and is available in both UAT and Production environments.

Only network participants ready to go live on NBFC-AA Specifications 2.0.0 must use the V2.0 API version of the CR GET API. All other network participants should continue using the current version of the CR GET API until they are ready to move to NBFC-AA Specifications 2.0.0.

Please refer to this document for more information on CR GET API V2.0.

For more details about the **go-live process** for network participants on NBFC-AA Specifications 2.0.0, please refer to this page.

For any questions, queries, and comments, please contact kunal@sahamati.org.in.

Best Regards,
Team Sahamati
